

fileSMART Version 7.5 Release Notes

Please read these release notes and follow the installation instructions available on the download page before you install the update. The following list contains fixes and improvements for both the Property Management (PM) and Strata versions of fileSMART.

Version 7.5.3

Description	Type	Detail
Support for new Macquarie Bank Limited DEFT biller id 422.	Enhancement	fileSMART has been enhanced to handle the new DEFT 422 barcode. No other user changes are necessary for an existing Strata Levy in REST Professional for the DEFT 422 barcode changes. The new DEFT Strata Levy barcodes will now be read like existing '168' DEFT barcodes. Additionally the \$2.75 service fee will be deducted from the barcode scan line amount that is read and displayed to the fileSMART user in the 'REST barcoded invoice processing' workflow.

Version 7.5.2

Description	Type	Detail
STRATA Workflow	Enhancement	fileSMART version 7.5 introduces further efficiency gains in the area of STRATA Master workflow for forms. The focus of the new Strata forms workflow is to incorporate electronic receipt and workflow of forms delivering an end to end automatic solution from the moment the form is received into fileSMART workflow to the time a Strata Manager needs just one click approval of the form. A new document type has also been added called 'voting forms'.
Support for additional New Zealand supplier barcodes for REST Professional	Enhancement	Support for additional New Zealand supplier invoices for fileSMART workflow has been added. The new fileSMART workflow can handle the New Zealand barcode standard used for identifying creditors on a New Zealand invoice, such as Council rates and Water rates.
Support for additional New Zealand supplier barcodes for STRATA Master	Enhancement	Support for additional New Zealand supplier invoices for fileSMART workflow has been added. The new fileSMART workflow can handle the New Zealand barcode standard used for identifying creditors on a New Zealand invoice, such as Water rates, energy bills and gas bills.
Some email contacts from REST Professional where not being shown in the fileSMART PrintMail contacts table or used in collations.	Fix	Some email contacts from REST Professional where not being shown in the fileSMART PrintMail contacts table or used in collations. This issue has now been fixed.
